

Be prepared to change

REDEFINING ERP CONCEPTS...

IAS, combining its vast exposure of more than 20 years in ERP arena and its expertise in implementing more than 500 end to end ERP projects is offering its customers a new ERP experience with its new 6.03 version.

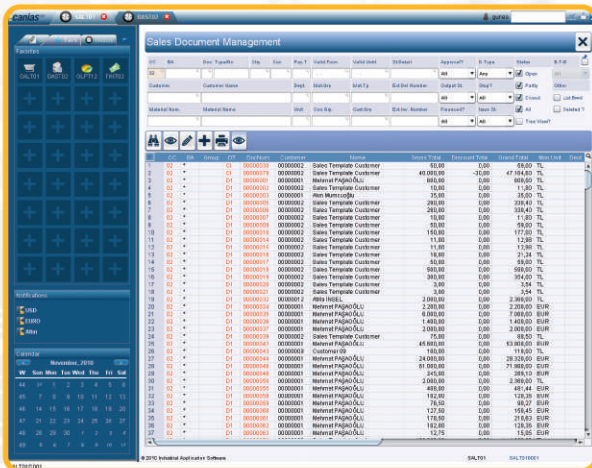

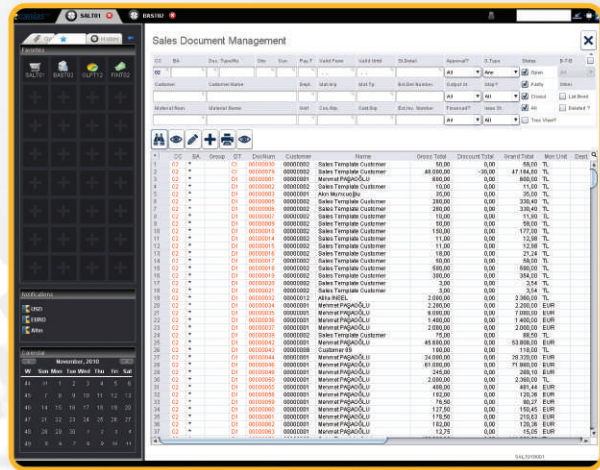

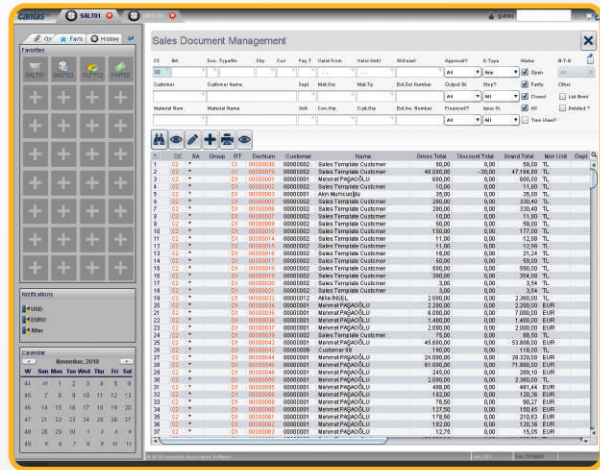

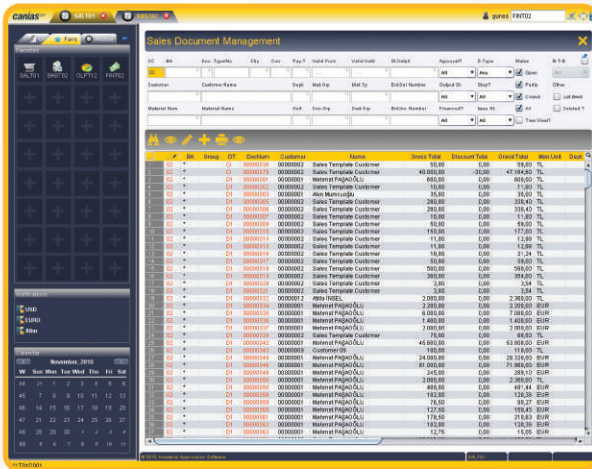

CANIAS 6.03, with its new module offerings like Project Management, Work Process Management, Retail Management, Automation etc adds new dimension to the total ERP offering by presenting you much more than what is expected from a contemporary ERP system.

Modern and dynamic user interface experience with CANIAS 6.03

If you are fed up with the mundane & colorless applications you have to counter everyday, CANIAS 6.03 offers you a fresh, dynamic & intuitive user interface developed using today's cutting edge designing principles. Furthermore, with its improved theme management features, users have the option to either choose the required interface from the pre defined themes or generate custom themes by a few mouse clicks.

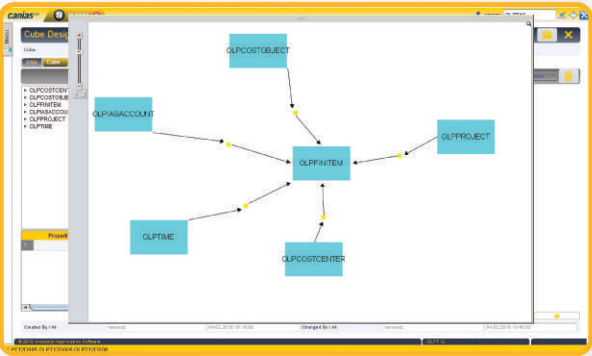

INFRASTRUCTURE

No more viewing of data's in tiny boxes

Viewing of tables, graphics or diagrams which are not big enough could pose difficulties for the users. The new full-screen control view feature of CANIAS 6.03 shows the components you want in full-screen with just one click and helps you to see your data from a wider perspective.

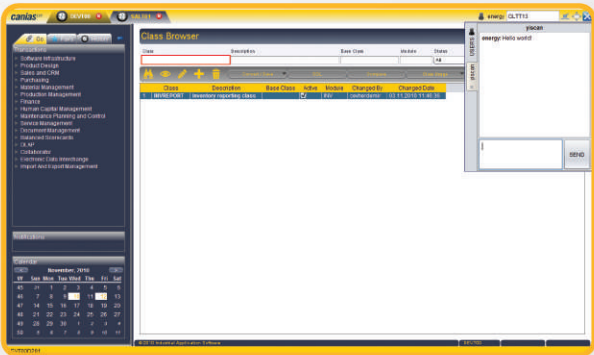

Save time from monotonous data entry

CANIAS 6.03 saves your time by automating routine data entry operations and helps you reach the data you are looking for easily. Wondering how? Just save each data series you have to enter regularly by assigning them a name, access this data by its name with a few clicks, using drag & drop feature without having to use your keyboard.

Instant Messenger making communications instantaneous

If you believe that an instant messaging infrastructure is needed for an effective working environment for your employees, CANIAS 6.03 provides you an easily manageable instant messaging infrastructure directly integrated to your working environment. In short, you don't need to use your telephone or wait for an e-mail for hours, in order to exchange not only a few words of information but also links to application screens and business tasks. This will also save configuration and management costs of a second IM software.

INFRASTRUCTURE

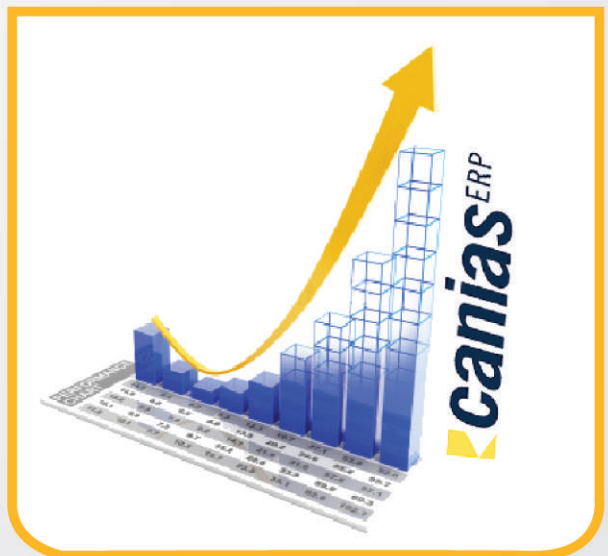

Stable & reliable application infrastructure

CANIAS 6.03 offers a superior, stable, reliable & futuristic ERP experience by virtue of its modern application infrastructure. It also offers effective monitoring and administration tools for continuous monitoring & control of your system.

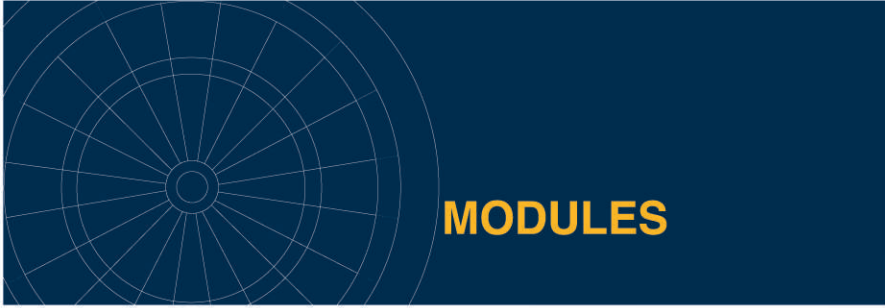

Work with CANIAS 6.03 without being interrupted even a moment.

With CANIAS 6.03, satisfactory performance can be guaranteed without making heavy hardware investments. With the new improvements made in the server-client architecture, CANIAS 6.03 provides its users the means to carry on their tasks without any momentarily interruption, either over intranet or internet.

Improved TROIA Programming Language, Component and Interpreter Infrastructure

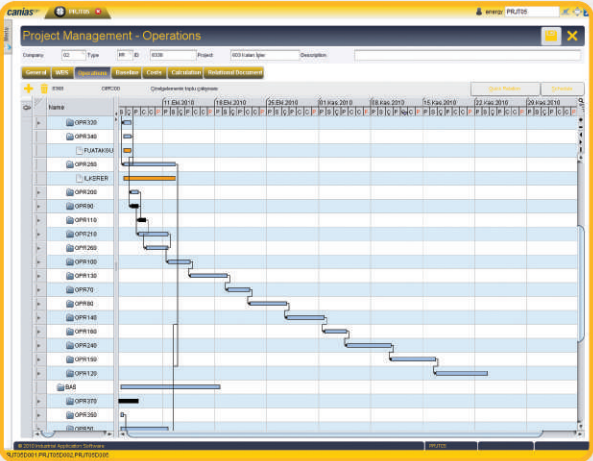

Renewed TROIA architecture and significant improvements in TROIA features offers a high performance runtime and also helps your company to develop custom applications with lower costs. With TROIA, having all the characteristics of a modern programming language, you can create custom components and use these components in many applications, thus overall reducing your efforts spent for development and maintenance.

MODULES

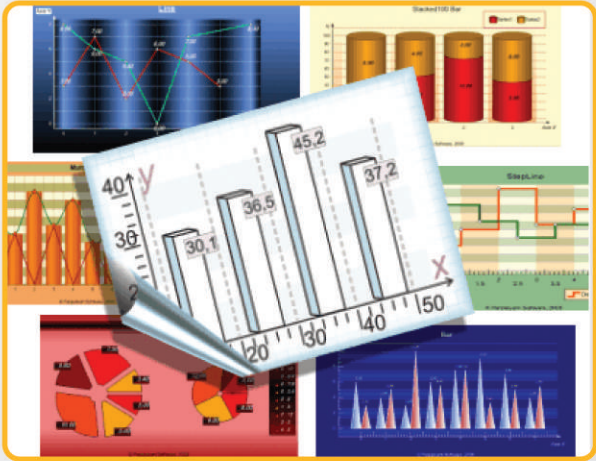

Your ERP and Project Management integrates by itself

In CANIAS 6.03, Project Management and ERP seamlessly integrate to plan the corporate resources of your business and help you to manage your projects, calculate their costs and plan the required resources, all under the same structure. You can define all your projects of different sizes within the system with different levels of details and schedule them using a single button. Purchase orders and production plans are created automatically according to your requirements generated during scheduling process. You can also monitor these purchase orders and production plans in line with the project by using the existing integration tools. CANIAS 6.03 Project Management module meets all of your basic project management needs and offers much more with its seamless ERP integration.

Perform companywide MRI with CANIAS 6.03 OLAP module

It is now too easy to create summary and analysis of companywide reports from mass operational raw data. You can have access to many quantitative data such as real-time profit margins, product costs, regional and sales channel based distribution of sales etc based on which you can prepare analysis reports in minutes. Through the visual and rich analysis tools, you can apply design changes immediately, and experience interactive analysis on cubes.

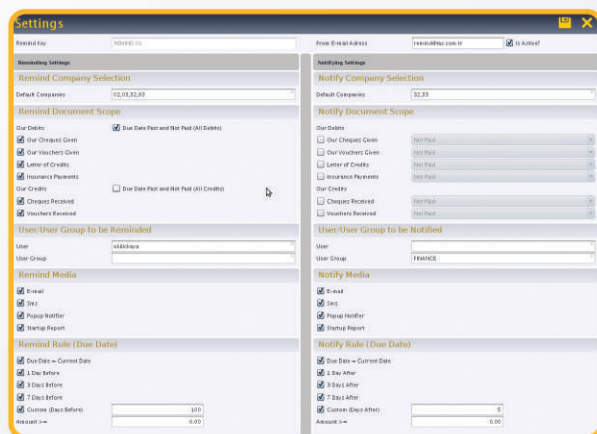

MODULES

With Work Process Management Module, it is now very easy to manage your processes

Do you have workflow related communications problems at your work? It is now possible to achieve high efficiency with the Work Process Management application of CANIAS 6.03. You can optimize the information flow at your company with the visual process design tool developed specially for this application. Besides, you can have your users at different locations work together and conduct decision making mechanisms automatically.

Financial Reminder

Now, you don't have to manually follow the deadlines of your cheques and promissory notes, insurance policies and letters of credit. With its Financial Reminder Application, CANIAS 6.03 can follow-up all your deadlines and notify you instantly with SMS or E-mail.

Many solutions for accounting standards with one system

You can simultaneously apply and manage accounting standards such as TMS, IFRS, US GAAP, etc. with CANIAS 603.

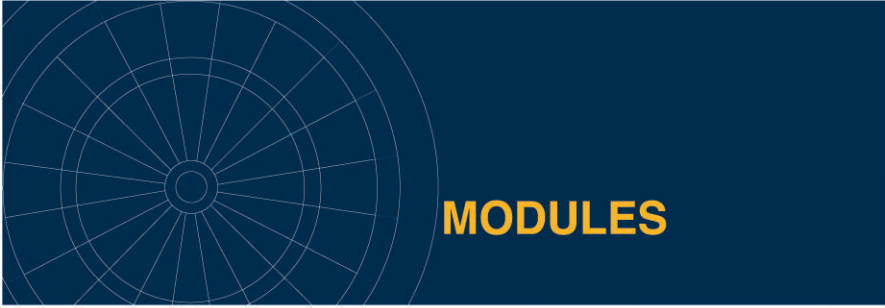

More flexible management reports in CANIAS 6.03

You can easily control and manage your Group companies with consolidated reports which can be easily created. Further, financial analysis such as receivables turnover, commercial debt transfer rate, leverage ratios, net profit margins etc can be managed using CANIAS 6.03 financial ratios and key performance indicators.

The screenshot shows the 'Financial Ratios' report in CANIAS 6.03. It displays a table of financial ratios with columns for Ratio Name, Description, Value, General Bal Value, Settlers Bal Value, and various trend indicators (Trend 1 to Trend 4).
